## Objective

- Describe and explain the Mozambican border control.
- Expose the processes and features of border control.

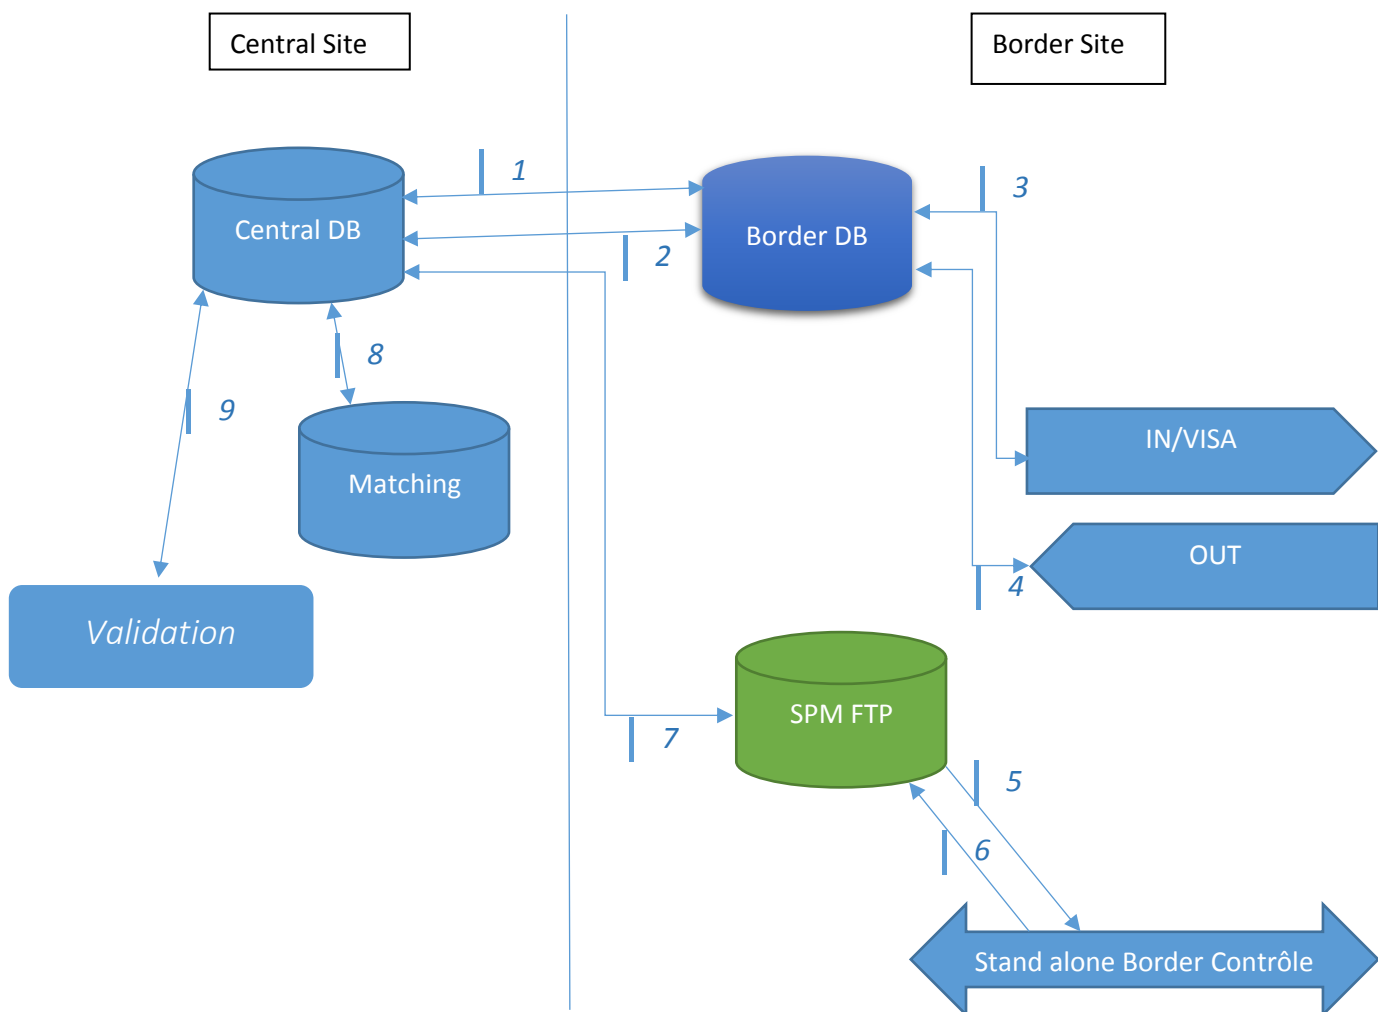

## Schema

### 1. BNS DB replication

DB replication is set to replicate data periodically (now every 5 min)

### 2. BLACK LIST replication

A complete snapshot of the central DB is pushed to every connected site

## Layout

---

Mozambican borders are divided into two groups:

1. The interconnected borders

A server is in place. All border machines are connected to the server.

2. The standalone borders

Generally, this is a small border. The border is equipped with one machine.
